

## Spex® Jenway® Genova Bio Spectrophotometers

The multi-element detectors on these scanning spectrophotometers measure the entire wavelength range at once, reducing wait times. Plus, each dataset contains readings from the complete spectrum, making the data readily available for future analysis. The detector's orientation shields the array from stray light, allowing you to perform measurements with the lid open, quickly exchange samples, and decrease user errors in results. The small footprint takes up less bench space, while the large colour touch screen is easy to read, and the graphical interface is intuitive. The USB port on the rear connects with a printer (sold separately), while the USB on the front accepts flash drives for data storage, quantitation curve uploads, and firmware updates. Measurement modes include photometrics, concentration, optical density (O.D. at 600nm), quantitation, spectrum scanning, and kinetics.

- Diode array technology speeds up spectral data acquisition
- Simultaneous measurement of all wavelengths increases productivity, scan time as short as 3 seconds
- Multiple measurement modes for broad application compatibility
- Preprogrammed for DNA, RNA and protein analysis
- Simple and easy to use at an affordable price
- Narrow spectral bandwidth of 3nm identifies peaks for determining nucleic acid purity
- Dedicated to life science applications
- Supplied with micro-cuvette holder, USB memory stick, and power adapter with three plugs (US, EU, and UK)
